**ROLE PLAY SCRIPT AND FLOW**

**Characters:**

**Teacher:**
Jean

**Students:**
Mae
Chelda
Ilexis Wayrint
Alyssa
Shyra
Vince

**FLOW**

**Scene 1: Teacher Introduction**
Teacher enters the scene.

**Scene 2: Presenting the Graph**

**Jean:** Here is a graph showing the average monthly temperature in New Haven, Connecticut. Take a moment to look at it.

**Jean :** What can you observe from the graph?

**Shyra:** The temperature seems to be increasing every month.

**Vince:** Yes, it looks like the temperature is rising dramatically from January to July.

**Teacher:** Good observations. Based only on this graph, what conclusion might someone make?

**Chelda:** They might think that the temperature will continue increasing after July.

**Teacher:** Very good. But let's examine the graph more carefully.

**Scene 3: Ma noticed ang Misleading data**

**Allysa:** Wait, Ma'am! I noticed something. The graph only shows January to July.

**Teacher:** Correct! What could be the problem with that?

**Ilexis:** It doesn't show the other months of the year. So we're only seeing half of the year's data.

**Mae** : If we included August to December, we could see what happens to the temperature after July.

**Teacher:** Exactly! The problem is not necessarily that the numbers shown are false. The problem is that important data has been left out.

**Mae :** So incomplete data can affect how people interpret a graph.

**Teacher:** That's right. We should always ask: "Is the graph showing all the relevant data?"

**Scene 4: Mag Recreate sa graph**

**Teacher:** Now, I want you to create the graph using the complete set of monthly temperature data. You may choose a line graph or another appropriate type of graph. The goal is to avoid giving a misleading impression by leaving out relevant information.

**Chelda:** We will make sure our graph has January through December.

**Allysa:** We will compare our graph with the original one and see how the interpretation changes.

**SCENE 5 : PRESENTING THE NEW graph**
Mae will present the corrected graph.

**SCENE 6: (CLOSING PART)**
Teacher will explain the importance of having a correct graph.
